

Т. Т. Битвинскас, И. И. Кайрайтис

ДЕНДРОХРОНОЛОГИЧЕСКИЕ ШКАЛЫ СОСНЫ (*PINUS SILVESTRIS* L.) ДЕНДРОКЛИМАТОЛОГИЧЕСКОГО ПРОФИЛЯ МУРМАНСК - КАРПАТЫ

Дендрохронологические (дендроклиматологические) шкалы (таблицы индексов ширины годичных колец) сосны по профилю Мурманск - Карпаты (Мурманская обл. - Карельская АССР -- Ленинградская обл. - Новгородская - Псковская области - восточная часть Латвийской ССР, восточная часть Литвы - Западная Белоруссия и западная Украина до Закарпатской области включительно) представляют многолетний труд дендроклиматохронологической лаборатории Института ботаники АН Лит. ССР.

По сбору дендрохронологического материала было организовано несколько экспедиций в северные и южные области страны. В сборе материала участвовали сотрудники лаборатории Т. Битвинскас, С. Аудицкас, И. Кайрайтис, ст. лаб. К. Кереевас, Л. Меджунайте и др. Часть пробных площадей была заложена совместно с экспедициями Института Археологии АН СССР (проф. Б. А. Колчиным) - пр. пл. № № 12-14; 16-17; 21-22-23; и в Литовском Леспроекте при изучении текущего прироста насаждений Битвинскасом (участки № № 26, 27, 28, 29, 30, 31) - дендрошкалы которых построены как средние по многим пробным площадям. Особенно большую работу при сборе дендрохронологического материала выполнили И. Кайрайтис и К. Кереевас на южной и северной частях профиля.

Образцы древесины брались возрастным буравом (буравом Пресслера) на высоте груди по одному образцу с дерева. Образцы древесины камерально измерялись микроскопом МБС-1 или МБС-2 с точностью 0,1-0,05 мм, в зависимости от ширины годичных колец насаждений. Для построения профиля было использовано более 2700 образцов древесины (цилиндриков) с возрастом шкал от 58 до 357 лет. Отдельные модели, взятые в местах исследования, имели значительно больший возраст - в Литовской ССР - модели Л-1 (возле пр. пл. № 30) - возраст 302 года, модели К-1 (около пробной площади № 12) - 525 лет.

Годичные индексы древесины (ширины радиального прироста древостоя) рассчитывались по методике предложенной Т. Битвинскасом - путем суммирования определялась средняя ширина годичного слоя изучаемого насаждения, строилась средняя многолетняя скользящая двенадцатилетняя кривая по пятилетиям. Недостающие годы на концах

кривой экстраполировались с учетом ее направления в начале и конце. Индексы рассчитывались по формуле:

$$I_j = \frac{i_j \cdot 100}{i_c}$$

где  $I_j$  - годичный индекс ширины годичного слоя дерева (насаждения),  $i_j$  - ширина годичного слоя в любом году,  $i_c$  - средняя многолетняя ширина годичного слоя дерева (насаждения).

Часть научных результатов, полученных по дендроклиматологическому профилю Мурманск - Киренга, опубликована в монографии Т. Битвинскаса "Дендроклиматические исследования". Гидрометеоиздат, Л., 1974 и в сборнике Института ботаники АН Лит. ССР "Условия среды и радиальный прирост деревьев" Каунас, 1978, с. 62-80.

Ниже печатается список публикуемых дендрохронологических и типологических характеристики пробных площадей сосны, заложенных на профиле. Авторы стремились подобрать для профиля относительно сухие или нормально увлажненные пробные площади, главным образом представляющие бруснично-черничные типы леса. Как контраст для сопоставлений являются пробные площади № 4, 8, 27 представляющие болотные условия местопроизрастания.

Схема расположения пробных площадей в пространстве дана на рис. 5 и 6.

Часть взятых отдельных моделей на профиле была использована физико-техническим институтом АН СССР (Г. Е. Кочаров и В. А. Дергачев и отдельными радиоуглеродными лабораториями Советского Союза для изучения содержания радиоактивного радиоуглерода  $^{14}\text{C}$  в годичных кольцах деревьев по проблеме "Астрофизические явления и радиоуглерод". С результатами данных исследований можно ознакомиться в трудах шестого всесоюзного совещания по проблеме "Астрофизические явления и радиоуглерод" состоявшемся 1976 г., изданным в Тбилиси 1978 г.

Таблица № I

Пункты исследований (дендрощкалы) профиля Мурманск - Карпаты

| № пр. пл. | Район исследований                                                                    | Число испол-зованных об-разцов древе-сины в шкале | Тип леса                     | Условия место-произ-растания            | Протяжен-ность шка-лы (в го-дах) |
|-----------|---------------------------------------------------------------------------------------|---------------------------------------------------|------------------------------|-----------------------------------------|----------------------------------|
